EDUCATION

B.Tech., Computer Science Engineering — **Bennett University, Greater Noida. CGPA 8.0** 2023 – 2027
HSC (12th), The Vivekanand School, Delhi / SSC (10th), Aster Public School, Greater Noida

EXPERIENCE

Full Stack Developer Intern — Lit India Pvt. Ltd.

June 2025 - July 2025

- Participated in the complete SDLC — from requirements gathering to deployment — gaining hands-on exposure to production-grade workflows.
- Built and integrated UI features using React, Node.js, and Express, contributing to user-facing functionality and system performance.
- Containerised services using Docker, reducing environment inconsistencies across development and staging.
- Identified, debugged, and resolved application bugs, improving system stability and overall code quality.

PROJECTS

AI Meeting Assistant Bot

React, Node.js, MongoDB, Python, Playwright, WhisperX

- Engineered an AI-powered meeting assistant capable of joining online meetings via link, capturing audio, and processing conversations into structured outputs such as summaries, action items, and tickets.
- Built full-stack architecture using React for the dashboard, Node.js + Express for backend APIs, MongoDB for meeting and transcript storage, and a Python microservice for speech transcription and speaker diarization.
- Implemented browser automation using Playwright to enable bot-based joining of Google Meet, Zoom, and Microsoft Teams, with support for platform detection, session handling, and pre-join workflow automation.
- Designed a transcript-processing pipeline using WhisperX for timestamped transcription and pyannote.audio for speaker diarization, generating speaker-wise meeting intelligence in near real time.

Database-Driven Library Management Backend

Python, SQLite3

- Designed and implemented a relational database (SQLite3) with a well-structured schema and primary-key constraints for data integrity — demonstrating backend logic applicable to real-world record management.
- Built robust CRUD operations in Python with error handling for duplicate entries and data consistency, reflecting the precision required in business-logic systems.
- Architected clean separation of data layer and application logic, laying groundwork for scalable backend design patterns.

SKILLS

Languages: Python, Java, C++, R, SQL, Git

Frontend / SDK: React, HTML/CSS, UI Component Development

Backend / DevOps: Node.js, Express, Docker, Linux, AWS

Data / DB: MongoDB, SQLite3, SQL (CRUD), Database Schema Design

Concepts & Tools: SDLC, REST APIs, WebSockets, Browser Automation, Speech-to-Text Pipelines, MERN Stack, AI Workflow Integration

CERTIFICATIONS

- Artificial Intelligence with Python — Coincent AI
- Neural Networks and Deep Learning — Coursera
- CS403: Introduction to Modern Database Systems — Saylor Academy
- Object-Oriented Data Structures in C++ — University of Illinois
- MATLAB Programming Techniques — MathWorks
- Digital Electronics — Infosys

ACHIEVEMENTS & ACTIVITIES

- Bennovate 3.0 Ideathon — Presented entrepreneurial solution for travel agency management under Wizar
